

■# COMET LEAP Founder Perfect Report (2026-05-27)

FOUNDER SIGNOFF LINE

Lantern OS is operational as a local-first evidence cockpit, with wallet discipline preserved: one invoice is sent, cleared cash is still \$0, and readiness depends on real user/payment events next.

EXECUTIVE SNAPSHOT

Lane	Current State	Confidence	Evidence
Local app surface	Running architecture exists with status/pages/wallet APIs	Medium-High	apps/lantern-garage/server.js, manifests/validation/LANTERN-GARAGE-APP-LATEST.json
Founder cash lane	Invoice motion is active; no fake revenue recorded	High	data/wallet/local-cash-wallet.json, data/wallet/ledger.jsonl
Evidence system	Whitepaper/ADS/report pipeline present with PDF rendering	Medium-High	reports/*.md, scripts/Build-PerfectArtPdf.ps1
Deployment certainty	Worktree is dirty and branch is behind origin	Medium risk	local git status inspection

WALLET TRUTH (NO FANTASY MONEY)

Metric	Value	Source
Cleared cash	\$0	data/wallet/local-cash-wallet.json
Draft invoice total	\$199	data/wallet/local-cash-wallet.json
Pending invoice total	\$199	data/wallet/local-cash-wallet.json
Latest event	invoice_sent	data/wallet/ledger.jsonl

The operating rule remains: do not claim revenue until funds are actually cleared.

WHAT IS PROVEN VS PLANNED

Category	Proven Now	Planned Next
Product cockpit	Tony Garage pages and wallet API exist locally	More user-result receipts and routine validations
Cash process	Draft -> sent invoice state is now recorded	Payment-cleared or objection outcomes logged factually
Report system	Repeatable !perfect PDF path is available	Weekly founder packet cadence with new evidence

TOP RISKS

Risk	Why It Matters	Mitigation
Dirty worktree drift	Changes can become hard to reason about or ship safely	Keep changes small and intentional; commit in focused slices
Behind remote branch	Local state may miss upstream fixes	Sync with fast-forward-only only when safe and intentional
Revenue overstatement risk	Decision quality collapses if money state is blurred	Keep strict wallet event taxonomy: drafted/sent/cleared/refund/objection

72-HOUR FOUNDER ACTIONS

- 1. Log 5 factual outreach or follow-up events in wallet ledger.
- 2. Capture at least 1 outcome event: objection, call, or payment-cleared.
- 3. Run local validation pass and snapshot results into a dated manifest.
- 4. Cut one focused commit that improves reliability (not breadth).

OPERATOR COMMAND SET

```
cd C:\tmp\lantern-os

# Add factual wallet events (example)
powershell -NoProfile -ExecutionPolicy Bypass -File .\scripts\Add-WalletLedgerEvent.ps1 -Event outreach_sent -Status sent -Evidence "Follow-up sent to warm lead on 2026-05-27."

# Render this report to !perfect PDF
powershell -NoProfile -ExecutionPolicy Bypass -File .\scripts\Build-PerfectArtPdf.ps1 -Source reports/COMET-LEAP-FOUNDER-PERFECT-REPORT-2026-05-27.md -Output artifacts/COMET-LEAP-FOUNDER-PERFECT-REPORT-2026-05-27.pdf
```

FOUNDER DECISION

The system is good enough to push disciplined execution now. Keep claims narrow, keep wallet truth strict, and let evidence from real outcomes drive the next confidence jump.
