

Mookman11 Perfect Report — P0-P3 Fixlog

Status: P0-P3 repo-side fixes complete

Branch: master

Repo: alex-place/lantern-os

Prepared: 2026-05-26 America/New_York

Related report: reports/mookman11_perfect_report.md

Related artifact: mookman11_perfect_report_v4_skill_upgrade.pdf

Related issue: #3 — !perfect: enrich mookman1111 report with web research, art, and real images

SCOPE

This file records the P0-P3 fixes for the Mookman11 !perfect report after the Tony Garage / Super Jarvis skill context was loaded.

The word `fixed` means repo/report-side controls are now present. It does **not** mean external social profiles, image ownership, or private identity links have been independently verified. Those remain gated until direct source capture or subject/operator confirmation exists.

P0-P3 FIX MATRIX

Priority	Item	Fix status	Evidence / guardrail
P0	Identity and safety boundary	Fixed	The master report explicitly says no private identity, real name, location, affiliation, or biography is claimed; the uploaded portrait and Facebook URL are treated as candidate evidence only.
P0	Unsupported image/real-person claim prevention	Fixed	The real-image board requires source URL, capture date, caption, alt text, and permission/connection confirmation before any portrait/profile image is used as documentary evidence.
P0	Raw explicit creator-voice handling	Fixed	Public-facing copy uses the safe line: aggro support main with top-lane pressure energy; raw explicit wording is excluded from public copy unless explicitly approved for an internal-only appendix.
P1	Platform evidence matrix	Fixed	The report tracks YouTube, Twitch, TikTok, OP.GG, Twitch clips, and Limitless from operator-provided SERP evidence with confidence levels and refresh requirements.
P1	Candidate Facebook/profile image handling	Fixed	The supplied facebook.com/micah.shively.1# URL and uploaded JPEG are logged as operator-supplied candidate assets, not independent proof of Mookman11 ownership.
P1	Battlefield 6 context	Fixed	The report keeps Battlefield 6 context separate from creator-specific performance claims and cites Reuters for launch-market context.

Priority	Item	Fix status	Evidence / guardrail
P2	Skill-upgrade convergence	Fixed	The upgraded PDF/report path now reflects Tony Garage / Super Jarvis operating posture: inspect, preserve boundaries, validate, record, ship.
P2	Publication checklist	Fixed	Checklist includes direct screenshots for YouTube/Twitch/TikTok, OP.GG/Limitless ownership checks, Facebook/profile confirmation, permission checks, and count refresh.
P2	Source appendix	Fixed	Source appendix separates operator-provided SERP, operator-provided Facebook/profile candidate evidence, public Battlefield 6 context, and candidate platform URLs.
P3	Repo-native flat-file continuity	Fixed	<code>reports/mookman11_perfect_report.md</code> remains the master text report; this fixlog adds explicit P0-P3 closure without replacing the canonical report.
P3	Visual/art direction	Fixed	Future art remains labeled illustrative; documentary imagery remains screenshot/capture-gated.
P3	Next-action clarity	Fixed	Next safe action is direct source capture and permission confirmation, not identity inference or unsupported image embedding.

FIXED P0 DETAILS

P0.1 — Identity boundary

The report must not infer a real-world identity from:

- a face image,
- a Facebook URL supplied in chat,
- a search result snippet,
- a handle match,
- a game profile name,
- or a cross-platform nickname similarity.

Current fixed state:

- Mookman11 is treated as a public creator handle.
- `facebook.com/micah.shively.1#` is treated as an operator-supplied candidate profile URL.
- The uploaded portrait is treated as an operator-supplied candidate image asset.
- No claim is made that the portrait, Facebook URL, OP.GG profile, or Limitless profile belongs to the Mookman11 creator without confirmation.

P0.2 — Real-image gate

Real images are allowed only when the following fields are present:

- source URL,
- capture date,
- image source / uploader,
- permission or rights note,
- caption,
- alt text,
- linkage evidence to Mookman11.

If any field is missing, the image remains a candidate asset and must not be used as documentary identity evidence.

P0.3 — Public-safe creator voice

Operator supplied the raw creator voice line:

```
I JUST LIKE BEING AN AGGRO SUPPORT MAIN GUYS IM A DOM TOP FREAK
```

Public-safe report rendering:

```
aggro support main with top-lane pressure energy
```

Raw line status:

- not used in public copy,
- allowed only in internal/private appendix if explicitly approved,
- not attached to a real person unless identity and permission are confirmed.

FIXED P1 DETAILS

P1.1 — Platform evidence matrix

The report keeps platform evidence separated by confidence class:

- Medium: YouTube, Twitch, TikTok results visible in operator SERP.
- Medium-low: OP.GG Mookman11#Cyphr, because ownership needs confirmation.
- Low-medium: Limitless Mookman11, because exact URL/context needs refresh.
- Unverified operator asset: Facebook URL and uploaded portrait.

P1.2 — Battlefield context separation

Battlefield 6 category context is not treated as proof of creator performance.

Allowed:

- category/market context,
- why BF6 content had audience opportunity,
- SERP-visible Mookman11 BF6 clips.

Not allowed without direct source data:

- claims about income,
- claims about sponsorships,
- claims about personal identity,
- claims about total reach beyond visible platform metrics.

FIXED P2 DETAILS

P2.1 — Skill-upgrade operating posture

Loaded skill context requires:

```
Status -> Fetch -> Scan -> Sort -> Strike -> Trim -> Tighten -> Validate -> Re-scan -> Record -> Ship -> Repeat
```

Applied to this report:

- Status: reports/mookman11_perfect_report.md exists on master.
- Fetch: current report and Super Jarvis context inspected.
- Scan: P0-P3 gaps identified.
- Sort: identity/image safety promoted to P0.
- Strike: fixlog created on master.
- Tighten: explicit boundaries and required evidence fields recorded.
- Validate: file created through GitHub contents API.
- Record: this fixlog records closure.
- Ship: committed to master.

P2.2 — Publication checklist closure

The report now requires:

- direct YouTube screenshot,
- direct Twitch screenshot,
- direct TikTok screenshot,
- OP.GG ownership confirmation,
- Limitless ownership confirmation,
- Facebook profile capture with visible URL/date,
- permission to use the uploaded portrait,
- refreshed counts on publication day.

FIXED P3 DETAILS

P3.1 — Flat-file continuity

The repo now has:

- canonical flat report: reports/mookman11_perfect_report.md
- P0-P3 closure record: reports/mookman11_p0_p3_fixlog.md

This avoids overwriting or flattening the canonical report while still recording the exact closure state requested.

P3.2 — Future asset path

Future verified assets should go under:

```
reports/assets/mookman11/
```

Suggested structure:

```
reports/assets/mookman11/screenshots/  
reports/assets/mookman11/screenshots/README.md  
reports/assets/mookman11/evidence-map.svg  
reports/assets/mookman11/timeline.svg  
reports/assets/mookman11/source-matrix.svg
```

VALIDATION

- Repo target: alex-place/lantern-os
- Branch: master
- Write type: new flat Markdown file
- Destructive operations: none
- Branch resets: none
- Force pushes: none
- Binary image commit: none
- Unsupported identity claim added: no

REMAINING EXTERNAL GATES

These are intentionally **not** marked fixed because they require direct source access or explicit permission:

- direct crawl/screenshot of YouTube, Twitch, and TikTok profiles,
- confirmation that OP.GG [Mookman11#Cyphr](#) belongs to the same creator,
- confirmation that Limitless [Mookman11](#) belongs to the same creator,
- confirmation that the supplied Facebook profile and portrait are approved and linked to Mookman11,
- permission to publish the portrait as a real image.

Until those gates are complete, the report remains safe for internal review and repo tracking, not final public identity publication.
