

Super Jarvis Lantern OS

Generated: 2026-05-26

Repo: `https://github.com/alex-place/lantern-os`

Status: pre-v1.0.0 convergence control plane. Release remains held until operator approval.

What Exists Now

Lantern OS is now one local-first convergence repo with a Super Jarvis skill spine, a flat RAG dollhouse, literal COMET LEAP PDFs/art assets, Bayesian world-model polling, Clean Storm agile sprints, Windows surfaces, dual-boot readiness, iPhone edge-node planning, server-farm inventory planning, and Archive.org/Wayback/commons metadata batching.

Master PDF

Primary master PDF:

Printable front page:

Skill Spine

Skill	Role
`skills/super-jarvis-lantern-os/SKILL.md`	top-level router
`skills/clean-storm-agile/SKILL.md`	12-step lightning sprint
`skills/bayesian-world-model/SKILL.md`	priors, evidence, posteriors
`skills/lantern-rag-dollhouse/SKILL.md`	flat memory and literal assets
`skills/comet-leap-agile/SKILL.md`	master PDF and next agile method
`skills/foundry-shareholder/SKILL.md`	shareholder/repo universe
`skills/archive-commons-batch/SKILL.md`	public-domain/CC/OSS metadata batching

RAG Dollhouse Assets

Asset Type	Count
COMET LEAP PDFs	8
COMET LEAP 30-day images	30
Chart images	2
SHA256 asset manifest	1

Flat RAG file:

Clean Storm Loop

Rule: fix the first 2-4 actionable issues, trim fake/stale fat, preserve real boundaries, validate, push, repeat.

Bayesian World Model

Every important claim follows:

Decision bands: | Posterior | Action | ---:|---| `0.90-1.00` | promote unless boundary-held |
`0.70-0.89` | candidate | `0.40-0.69` | backlog and poll | `<0.40` | reject or quarantine |##
Boundaries- No unattended disk, partition, firmware, bootloader, or OS install actions.- True phone dual boot
remains held until device, backup, boot path, risk, and rollback are verified.- v1.0.0 release remains held until
operator approval.- Archive.org/Wayback/free media batching is metadata-first and rights-gated.-
Offline/local/server-farm Foundry tokens are unmetered internal capacity; cloud/API costs stay metered
separately.## Next Print LineLantern OS is the clean convergence control plane for COMET LEAP, Super
Jarvis, local RAG, Windows surfaces, dual boot readiness, and public commons intake.
