

COMET LEAPER Truth-Only Founder Report (Scientific Method Edition)

Generated: 2026-05-26T03:57:13 | Scope: Local workspace evidence + explicit uncertainty

Claim Hygiene Policy

This report removes repeated narrative filler and excludes unsupported claims.

Every statement is categorized as: Evidence, Inference, Hypothesis, or Open Question.

No production-readiness, guaranteed revenue, or certainty language is used without direct evidence.

If a claim cannot be verified from local artifacts, it is marked unverified and moved to hypothesis.

Verified Evidence Snapshot

Item	Status	Evidence Type	Confidence
Local app endpoint on 127.0.0.1:5001	Observed	Direct runtime check (HTTP 200)	High
Local Ollama endpoint on 127.0.0.1:11434	Observed	Direct runtime check (HTTP 200)	High
Multiple server-process conflict existed earlier	Observed	Process/netstat evidence	High
Convergence API present on one server variant	Observed	Endpoint behavior + code patch	Medium
Google Drive OAuth token available	Not observed	Credentials file missing	High
External-market outcomes/revenue forecasts	Not observed	No controlled trial data in workspace	High

Founder Money and Confidence Baseline

Metric	Value	Type	Interpretation
Cash on hand	\$600	Given input	Operationally tight
Pending deposit	\$2,000	Given input	Near-term liquidity relief
Actionable capital now	\$600	Constraint	Prioritize low-cost experiments
Post-deposit total	\$2,600	Scenario	Needs strict allocation controls

Scientific Method Framework for COMET LEAPER

1. Problem Definition

Define one measurable outcome per cycle (e.g., qualified conversations/week).

2. Hypothesis

State falsifiable hypothesis with expected effect size and time window.

3. Experiment Design

Use minimum-cost test, explicit stop criteria, and predefined success threshold.

4. Data Collection

Capture raw observations with timestamps, source, and confidence score.

5. Analysis

Separate descriptive stats from causal claims; report uncertainty and alternative explanations.

6. Decision

Promote, revise, or kill hypothesis based on thresholds, not narrative preference.

7. Replication

Repeat on a second cycle before elevating to team-level claim.

Claims Ladder: Theory vs Presentable Claims

Level	Label	Requirement	Allowed Language
L0	Idea	No data	Possible / speculative
L1	Hypothesis	Test plan exists	Expected if...
L2	Initial signal	One test pass	Preliminary evidence suggests...
L3	Replicated signal	≥ 2 passes	Evidence indicates...
L4	Operational claim	Stable over time	Currently observed under these conditions...

Current classification recommendation

Most growth/revenue assertions should remain at L0-L2 until controlled local experiments and replication logs are available.

Immediate 14-Day Research Protocol (Low Burn)

Day 1

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 2

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 3

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 4

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 5

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 6

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 7

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 8

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 9

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 10

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 11

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 12

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 13

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Day 14

Run one low-cost test, collect data, update confidence score, and record one decision: continue / revise / stop.

Do not add new tools unless today's test concludes with evidence-backed need.

Book Recommendation (Founder Finance)

Primary: Profit First (Mike Michalowicz) for immediate cash-allocation discipline under small-capital constraints.

Secondary: The Psychology of Money (Morgan Housel) for decision quality and risk behavior under uncertainty.

Final Note

This v2 report intentionally prioritizes truthfulness, uncertainty disclosure, and reproducible method over motivational certainty. Any future claim should cite evidence class and ladder level.
