DEPENDENCY PROMOTION PATH

All dependencies must follow this path:

```
registered -> read_only_inspected -> dependency_profiled -> adapter_or_manifested -> promoted_or_held
```

No dependency can skip:

- Local status
- Remote status
- Branch verification
- Build/test validation
- Secrets/env review
- Artifact verification
- Fallback path review

PROMOTION BOUNDARY REQUIREMENTS

A dependency may be promoted into Lantern OS only if it has:

1. Source path and remote URL
2. Clean or explicitly recorded dirty state
3. Build/test/run command or reason none exists
4. Secrets/environment variable review
5. License/rights/asset review
6. Rollback/fallback path
7. Validation receipt
8. Operator approval when required

CURRENT PROMOTION STATUS

Promoted to Lantern OS

- None (Lantern OS is the control plane, dependencies are referenced)

Held for Review

- Most business services (secrets/env review required)
- Site content (rights/content review required)
- Library/vendor forks (delta analysis required)

Retired References

- All HFF recovery/evidence snapshots
- Local backup directories

NEXT ACTIONS

1. **Secrets/Env Review:** Complete secrets and environment variable review for business service dependencies
2. **Rights/Content Review:** Complete rights and content review for site content dependencies
3. **Delta Analysis:** Analyze library/vendor forks to determine if delta is required

- 4. **Validation Receipts:** Generate validation receipts for promoted dependencies
- 5. **Fallback Paths:** Document rollback/fallback paths for all active dependencies
- 6. **HFF Consolidation:** Consolidate HFF recovery/evidence snapshots into single archive
