

Arc Reactor MK II Convergence Update

Date: 2026-05-26

Repo: alex-place/lantern-os

Branch: master

Mode: !perfect desktop app + higher-confidence model

SUMMARY

Lantern OS now treats the desktop app as the operator-facing Arc Reactor surface, not only a kid-facing games tab.

The upgrade adds a higher-confidence MK II model:

- Movie 1 garage confidence: 92
- Movie 2 public platform confidence: 61
- Movie 3 distributed fleet confidence: 29

These numbers are not vibes. They are proof-weighted indicators.

WHY CONFIDENCE INCREASED

Movie 1 increased because the control plane now has more real artifacts:

- Lantern OS master repo is active.
- Desktop surface exists.
- RAG house and repo reports exist.
- Patient packet workflow exists.
- 4D-GMS game system seed exists.
- MK1 suit/reactor concept seed exists.
- Discord/API convergence issue exists.
- Arc Reactor status is stored as structured JSON.

WHY MOVIE 2 IS STILL HELD

Movie 2 is not fully unlocked because public proof and cash/user validation remain incomplete.

Movie 2 increases only when there is:

- 1. public proof page or demo;
- 2. paid pilot, cash receipt, or hard rejection batch;
- 3. stakeholder/user feedback;
- 4. Discord lounge bot health check passing without leaked secrets;
- 5. MCP canary validating actual exposed tools;
- 6. one workflow used by someone other than the operator.

HIGHER-CONFIDENCE MODEL

The MK II confidence model separates:

- repo/report evidence;
- desktop/surface evidence;
- RAG/data center evidence;
- cash/public proof;
- MCP/Discord canary evidence;
- hardware/suit/reactor evidence;
- patient packet evidence;
- 4D-GMS evidence.

Confidence is updated only when the evidence class changes.

CALIBRATION RULE

Use Brier-style discipline:

```
forecast -> evidence class -> outcome -> error/lesson -> confidence update
```

Do not update confidence from excitement, aesthetic strength, or broad market ambition.

DESKTOP APP UPGRADE

Updated:

```
surfaces/lantern-desktop/index.html
```

The page now shows:

- Arc Reactor convergence header;
- MK II confidence core;
- Movie 1 / Movie 2 / Movie 3 meters;
- Games / 4D-GMS;
- Music;
- Gmail;
- Orch / Suzie / MCP;
- Arch Check;
- Discord health-check gate;
- proof-only score rules.

DATA MODEL UPGRADE

Updated:

```
data/arc-reactor/status.json
```

The file now contains:

- modelVersion: mk2-proof-weighted-calibration
- confidence lanes;
- Movie 2 unlock gates;
- calibration protocol;
- safety boundaries.

BOUNDARIES

- No fake revenue.
- No unattended disk mutation.
- No Discord-to-MCP command execution before canary.
- No v1.0.0 tag without operator approval.
- No store fee until product target is chosen.
- No medical or PPE claim without evidence.

NEXT SMALL ACTION

Create the Discord bot health-check script in the orchestrator repo only after current dirty branch work is either committed/stashed or explicitly approved for one additional file:

```
scripts/Test-DiscordBotHealth.ps1
```

Then run it locally without printing secrets.
