

Lantern Desktop Games Convergence Report

Date: 2026-05-26
Branch: feature/lantern-desktop-games-convergence
Target: master
Repo: alex-place/lantern-os

CONVERGENCE OBJECTIVE

Restore the kid-facing desktop-app shape from prior workspace memory: a simple tab/hub that shows Games / RetroArch next to Music, Gmail, Orch/Suzie, and Arch Check.

The result must be safe to show to a child: no automatic launches, no uncontrolled downloads, no account/password exposure, no purchases, and no copyrighted ROM instructions.

EVIDENCE READ BEFORE CHANGES

- The current Tony Garage surface exists at `surfaces/tony-garage/index.html` and covers whitepaper, ADS, RAG house, wallet, dual boot prep, cash sprint, and next moves.
- The orch repository README identifies Suzie as a Windows-first local AI work orchestrator with dashboard, task queue, MCP tool boundaries, provider quota, and agent slots.
- The orch dashboard starts from `scripts/Start-Dashboard.ps1` and serves `dashboard/index-v2.html` from localhost port 8765.
- The dashboard page title is `Work Station`.
- Searches for current `music`, `gmail`, and `arch` terms in the present dashboard did not find those old desktop tiles, so the new surface reconstructs the tab rather than claiming it still exists.

FILES ADDED

- `surfaces/lantern-desktop/index.html`
- `reports/LANTERN-DESKTOP-GAMES-CONVERGENCE-2026-05-26.md`

SAFETY RULES EMBEDDED

- 1. RetroArch is shown as a parent-controlled launcher tile, not an auto-run button.
- 2. Games rule is homebrew, public-domain, or personally-owned legal game files only.
- 3. Gmail is shown as parent-present only.
- 4. Music is limited to owned/local, public-domain, or Creative Commons music.
- 5. Orch/Suzie links to local dashboard instructions and does not start agents.
- 6. Arch Check is a read-only/prep tile and does not modify partitions.
- 7. No payments, downloads, passwords, or system changes are unlocked from the child page.

KID-FACING TILE MAP

Tile	Child Label	Parent Meaning	Risk Control
Games	Play retro games	RetroArch/homebrew/owned games	No downloads; parent opens
Music	Listen to music	Local/CC/owned audio	No purchases; no account changes
Gmail	Check mail with Dad	Browser Gmail	Parent nearby; no passwords shown
Orch	Robot helper board	Suzie Work Station dashboard	View-only status; no agent start
Arch Check	Penguin computer check	Dual-boot readiness	Read-only until parent action

OPERATOR COMMANDS

Orch dashboard:

```
cd "$env:USERPROFILE\Documents\gm-agent-orchestrator"  
powershell -NoProfile -ExecutionPolicy Bypass -File .\scripts\Start-Dashboard.ps1
```

Then open:

```
http://localhost:8765/dashboard/index-v2.html
```

RetroArch:

Ask parent to open RetroArch from the Start menu or the approved local install path.

Arch/Dual boot check:

Use Lantern OS dual-boot prep only as parent/operator action. Do not shrink disks from a child page.

VALIDATION PERFORMED

- Confirmed orch repo exists and is indexed.
- Confirmed orch dashboard script and Work Station page exist.
- Confirmed the current Lantern Tony Garage surface exists.
- Confirmed no prior surfaces/games/index.html existed on master.
- Generated a local PDF and rendered it to PNG for visual inspection.

DONE DEFINITION

This convergence is done when the branch is merged to `master` and the PDF is available for the operator to review.
