

Lantern OS Unified Skill Convergence Report

Status: unified skill convergence recorded

Branch: master

Repo: alex-place/lantern-os

Prepared: 2026-05-26 America/New_York

Primary skill: skills/super-jarvis-lantern-os/SKILL.md

Commit: c7d7585b8070ce1fcc49b916439fb01d1e7d1d26

EXECUTIVE SUMMARY

Lantern OS now has one canonical operator skill:

skills/super-jarvis-lantern-os/SKILL.md

The legacy skill folders remain in place as reference material and rollback history, but the active routing entryptoint is now the unified Super Jarvis skill.

This resolves the duplicated-skill problem by converging PDF/report generation, RAG memory, COMET LEAP / COMETSHOT, Founder / Patient A, Tony Garage, Arc Reactor confidence, wallet boundaries, archive rights, device boundaries, MCP verification, and validation into one operating file.

WHAT CHANGED

The Super Jarvis skill was rewritten into a single canonical entryptoint covering:

- repo inspection and safe patching;
- PDF/report generation and validation;
- RAG dollhouse flat memory and asset handling;
- COMET LEAP / COMETSHOT / Founder / Patient A updates;
- Bayesian evidence classes and confidence bands;
- Clean Storm sprint loop;
- Tony Garage / Arc Reactor readiness;
- wallet and trading boundaries;
- archive/commons rights-first intake;
- device, boot, server-farm, and MCP safety gates;
- legacy subskill reference map;
- shippable-change rules.

UNIFIED OPERATING LOOP

Status -> Fetch -> Scan -> Sort -> Strike -> Trim -> Tighten -> Bayes -> Validate -> Re-scan -> Record -> Ship/Repeat

This loop replaces scattered per-skill routing and should be used for all Lantern OS work.

LEGACY SKILLS CONVERGED UNDER ONE ENTRY POINT

Legacy skill	New role
skills/clean-storm-agile/SKILL.md	reference for lightning sprint steps
skills/bayesian-world-model/SKILL.md	reference for evidence classes and confidence updates
skills/lantern-rag-dollhouse/SKILL.md	reference for flat RAG and asset bundling
skills/comet-leap-agile/SKILL.md	reference for COMET LEAP / master PDF workflow
skills/foundry-shareholder/SKILL.md	reference for shareholder/reporting boundaries

Legacy skill	New role
skills/archive-commons-batch/SKILL.md	reference for metadata-first public-media intake
skills/one-world-leader-app/SKILL.md	reference for product/app compression
skills/arc-reactor-confidence/SKILL.md	reference for confidence and power-state scoring

If a legacy file conflicts with the unified Super Jarvis skill, the unified skill wins.

FOUNDER / PATIENT A / COMETSHOT HANDLING

The unified skill now includes a dedicated section for Founder / Patient A / COMETSHOT report requests.

Rules:

- Private/social/feed/watch-history material supplied by the operator is operator_private_context.
- Such material is internal unless explicitly approved for publication.
- Do not infer medical diagnosis, mental health state, legal status, or private identity details from social feeds or watch history.
- Separate founder/operator evidence from patient-style narrative.
- Use public-safe summaries in outward-facing PDFs.

PDF REPORT HANDLING

The unified skill now owns the PDF report workflow:

- 1. Inspect current Markdown/report/source state first.
- 2. Treat Markdown as source of truth.
- 3. Generate PDF from source.
- 4. Render PDF to PNG for layout validation.
- 5. Inspect page count, encryption, forms, attachments, and visible layout.
- 6. Keep documentary real images separate from illustrative art.
- 7. Require captions and alt text for real-image slots.
- 8. Record remaining external/private gates.

EVIDENCE CLASSES

The unified skill standardizes evidence classes:

Class	Meaning
local_verified	current local file/git/test/render output observed now
github_metadata	current GitHub connector or API metadata
source_repo_evidence	source file, report, issue, manifest, or commit content
official_source	current official web/API/docs source
operator_asserted	user statement or pasted UI/feed text
operator_private_context	private/social/feed/watch-history material supplied by operator
web_secondary	reputable secondary public source
external_search_snippet	search-result snippet or uncrawled web lead
projection	forecast or future capability
unknown	unclassified

P0-P3 CLOSURE

Priority	Closure
P0	Single endpoint established; private/identity/patient/wallet boundaries centralized.
P1	PDF/report workflow centralized under Super Jarvis.
P2	Legacy skills kept as references, not competing routers.
P3	Validation and ship rules recorded in the canonical skill.

VALIDATION STATUS

Performed through GitHub connector:

- Read current Super Jarvis skill.
- Read legacy skill files for Clean Storm, Bayesian, RAG, COMET, Foundry, Archive, One World Leader, and Arc Reactor.
- Updated skills/super-jarvis-lantern-os/SKILL.md on master.
- Created this convergence report on master.

Pending local validation:

- git status --short --branch
- scripts/Invoke-LanternConvergenceLoop.ps1
- quick_validate.py .\skills\super-jarvis-lantern-os
- git diff --check -- README.md docs manifests scripts skills reports .github

These are pending because the active session does not expose the local Windows shell for C:\tmp\lantern-os.

NEXT SAFE ACTION

Run the local validation pack from C:\tmp\lantern-os, then record results in a dated manifest or issue comment. Do not delete legacy skills until the unified skill has passed local validation and at least one full report/PDF regeneration cycle.
