

Mookman COMET LEAP Setup + Investor Readiness 72H

Date: 2026-05-26

Repo: alex-place/lantern-os

Branch: fix/mookman-cometleap-setup -> master

Mode: private-repo handoff, Discord bot fix path, \$1,000 end-of-month readiness

PURPOSE

Mookman1111 wants to help and may invest \$1,000 by the end of the month. This report turns that into a safe, concrete 72-hour setup plan.

The goal is not to take money first. The goal is to create a clean private-repo handoff, working local setup, Discord lounge bot health check, and a plain-English support/investment path with evidence.

LEGAL / MONEY BOUNDARY

Do not casually accept \$1,000 as equity, securities, profit share, token, or company ownership without written terms and proper legal review.

Safe near-term options:

- 1. **Pilot/customer prepay** - Mookman pays for a defined deliverable, such as setup, RAG cleanup, Discord bot scaffold, or support package.
- 2. **Sponsor/support contribution** - no ownership, no promised return, clear receipt.
- 3. **Hardware/prototype budget** - funds are earmarked for parts/tools, with receipts and no investment return promise.
- 4. **True investment** - held until written terms, entity/cap-table clarity, and securities-law review.

If the word is **invest**, pause and clarify terms before accepting funds.

WHY THIS BELONGS IN LANTERN OS

Lantern OS is the control plane. Mookman setup touches:

- private repo access;
- local Windows onboarding;
- Discord lounge bot visibility;
- MCP/orchestrator status;
- Arc Reactor confidence gates;
- cash/proof ledger;
- future investor/supporter record.

No confidence score should increase from intent alone. Confidence rises only after setup evidence, bot health results, payment receipt if any, and a written contribution/support agreement.

CURRENT EVIDENCE

From operator local PowerShell evidence in c:\Users\alexp\Documents\gm-agent-orchestrator:

```
## feature/comet-leaper-operational-launch
A EVIDENCE-CONFIDENCE-FRAMEWORK.md
A FINANCIAL-CONTROL-SYSTEMS.md
A OPERATING-NARRATIVE-IMPLEMENTATION.md
A PATIENT-PILOT-FRAMEWORK.md
A PERMANENT-PROGRESS-TRACKING-SYSTEM.md
A PROGRESS-DASHBOARD.md
A PROGRESS-TRACKING-INDEX.md
A README-PROGRESS-TRACKING.md
A RESEARCH-TEAM-OPERATIONS.md
```

Interpretation:

- Orchestrator local repo is dirty.
- Do not reset, clean, branch switch, or merge it blindly.
- Discord/bot search found only dependabot.yml false positives.
- No real Discord bot implementation was found in the local recursive search.

MOOKMAN ACCESS MODEL

Minimum access

Mookman needs only the access required for the next 72 hours:

- read access to lantern-os if he is reviewing reports/setup;
- read/write or branch access to gm-agent-orchestrator only if he will implement the Discord bot health check;
- no production secrets;
- no Discord token pasted into GitHub, Discord, chat, PDFs, screenshots, or logs.

Recommended role

Start with collaborator access that allows branch contribution but does not grant repo admin unless required.

LOCAL SETUP INSTRUCTIONS FOR MOOKMAN

On Mookman's Windows computer:

```
cd %env:USERPROFILE%\Documents
git clone https://github.com/alex-place/lantern-os.git
git clone https://github.com/alex-place/gm-agent-orchestrator.git
```

Open Lantern desktop:

```
cd %env:USERPROFILE%\Documents\lantern-os
start .\surfaces\lantern-desktop\index.html
```

Inspect orchestrator safely:

```
cd %env:USERPROFILE%\Documents\gm-agent-orchestrator
git status --short --branch
```

Do not run reset/clean. Report status first.

72-HOUR COMET LEAP PLAN

Window	Action	Definition of Done
0-4 hours	Preserve orchestrator dirty branch state	No reset/clean; current files committed/stashed or explicitly held
4-12 hours	Add Discord bot health-check scaffold	Script checks config without leaking secrets
12-24 hours	Run health check locally	Token/guild/channel/intents/permissions classified
24-48 hours	Add status-only lounge bot if health passes	/lantern-status returns safe summary only
48-72 hours	Record result in Lantern OS	Arc Reactor confidence updated only if evidence changes

DISCORD BOT HEALTH CHECK REQUIREMENTS

Create:

```
scripts/Test-DiscordBotHealth.ps1
```

The script should check, without printing secret values:

- DISCORD_TOKEN exists;

- app/client ID exists;
- guild/server ID exists;
- lounge channel ID exists;
- configured intents are known;
- bot can authenticate;
- bot can view/send in the intended lounge/test channel;
- no token is echoed in output.

STATUS-ONLY BOT RULE

Only after health passes:

```
scripts/Start-DiscordLoungeBot.ps1
src/discord_lounge_bot/README.md
```

First command:

```
/lantern-status
```

Allowed output:

```
Lantern OS: online/offline
MCP tools: verified/unverified
Queue: counts only
Last receipt: path/hash/time
Blockers: top 1-3
```

Forbidden in first bot:

- shell commands;
- MCP command execution;
- queue movement;
- branch reset/clean;
- secret display;
- admin-only Discord permissions;
- direct money/payment actions.

\$1,000 END-OF-MONTH READINESS

Before money moves, decide which lane this is.

Lane A - Customer / Pilot Prepay

Best near-term lane.

Possible deliverable:

```
$1,000 Mookman Founder Setup Pilot
- private repo setup guide
- Discord bot health check
- status-only lounge bot scaffold
- Lantern OS proof ledger update
- 72-hour setup receipt
- end-of-month review call/report
```

This is a service/pilot payment, not equity.

Lane B - Sponsor / Supporter

Good if Mookman just wants to help.

Terms:

- no ownership;
- no promised return;
- receipt issued;

- funds earmarked for software/hardware/convergence work;
- optional supporter credit if desired.

Lane C - Hardware/Prototype Budget

Good if funds are for suit/reactor/GPU/RAG hardware.

Terms:

- parts budget;
- receipts tracked;
- unused funds handled explicitly;
- no investment return promise.

Lane D - True Investment

Held.

Requires:

- written terms;
- entity decision;
- cap table / instrument choice;
- securities-law review;
- investor qualification if relevant;
- no casual promises in chat.

ARC REACTOR CONFIDENCE IMPACT

Mookman's intent alone does not raise confidence.

Confidence can rise if:

- he gets private repo access and confirms setup;
- Discord bot health check passes;
- status-only bot appears in lounge;
- \$1,000 becomes a documented pilot/sponsor/prototype payment;
- the result is recorded in Lantern OS with evidence.

Suggested temporary scores:

Lane	Before	After evidence
Movie 1 garage	92	93-94 if setup proof lands
Movie 2 public platform	61	65-70 if bot + documented payment/support proof lands
Movie 3 fleet	29	31-34 if another user runs setup independently

MOOKMAN ONE-PAGE MESSAGE

Mookman, the safest first step is not money. It is setup proof.

For the next 72 hours, we need you to get private repo access, clone Lantern OS and gm-agent-orchestrator, open the Lantern Desktop, and help validate the Discord lounge bot path. If the health check passes, we add a status-only /lantern-status bot. It will not execute MCP or shell commands.

For the \$1,000, we need to label it clearly before anything moves: pilot/customer prepay, sponsor/support, hardware budget, or true investment. True investment needs written terms and legal review. Pilot/support/hardware budget can move faster if the deliverable and receipt are clear.

DEFINITION OF DONE

This setup is complete when:

- Mookman has the correct private repo access;
- he can open Lantern Desktop locally;
- orchestrator dirty state is preserved;
- Discord bot health check exists and runs without leaking secrets;
- lounge bot is status-only if enabled;
- \$1,000 lane is clarified before money moves;
- Lantern OS Arc Reactor is updated only from evidence.
