

Human Trial Gate Monitor Report

Generated: 2026-05-31T03:31:58
Engine: Human Trial Gate Monitor v1.0
Status: [BLOCKED] DO NOT PROCEED

SIMPLE ANSWER

Human Trial Demo Readiness is at **57.1%**. **4 of 7** critical gates met. Blocked by 3 critical gates. DO NOT PROCEED with human trials.

WHAT IT ACTUALLY DOES

The Human Trial Gate Monitor enforces the 8 strict requirements from data/arc-reactor/status.json before any human trial demo can proceed:

- 1. **5 founding demos** - \ founding seat demos with cleared cash
- 2. **MCP canary** - All exposed tools validated before automation
- 3. **Rollback paths** - Documented rollback for every automated action
- 4. **Human approval** - Explicit approval recorded for each participant
- 5. **PPE evidence** - Certified PPE if medical claims exist (conditional)
- 6. **ASI validation** - No ASI capability claims without independent validation
- 7. **Brier tracking** - Forecast/outcome error tracking active
- 8. **Safety gates** - Automation gates configured and tested

This is a **hard safety boundary** - no human trials until all critical gates pass.

EVIDENCE / SOURCE DISCIPLINE

Arc Reactor Status: D:\tmp\lantern-os\data\arc-reactor\status.json
Evidence Directory: D:\tmp\lantern-os\manifests\evidence
Wallet Ledger: D:\tmp\lantern-os\ledger\mookman-20-wallet-version-2026-05-26.yaml

Gates Checked:

- **founding-demos-5** (critical) - BLOCK - Found 0 founding demo receipts/ledger entries - **mcp-canary-all** (critical) - BLOCK - No MCP canary validation yet (29 sources to check) - **rollback-paths** (critical) - PASS - AGENTS.md provides rollback guidance - **human-approval** (critical) - BLOCK - No human approval receipts yet - **ppe-evidence** - PASS - No medical claims - PPE not required - **asi-validation** (critical) - PASS - ASI pattern boundaries configured - **brier-tracking** (critical) - PASS - Brier tracking system active - **safety-gates** (critical) - PASS - Safety gates configured (hooks.json + hooks/)

Category Breakdown:

- Safety gates: 3/4 met
- Revenue gates: 0/1 met
- Compliance gates: 0/1 met
- Calibration gates: 1/1 met
- Claims gates: 1/1 met

PROVEN / HELD / LOCAL-ONLY

Passing Gates:

- [PASS] [CRITICAL] **Documented rollback path for all automated actions** (1/1)
- [PASS] **Certified PPE or tested prototype evidence if medical claims** (0/0)
- [PASS] [CRITICAL] **No ASI capability claim without independent validation** (1/1)
- [PASS] [CRITICAL] **Brier-style error tracking with forecast/outcome pairs** (1/1)
- [PASS] [CRITICAL] **Safety automation gates configured and tested** (1/1)

Blocked Gates:

- [BLOCK] 5 successful founding seat demos with cleared cash [gap: 5]
- [BLOCK] MCP canary validates all exposed tools before automation [gap: 1]
- [BLOCK] Explicit human approval recorded for each trial participant [gap: 1]

Local-Only:

- This report is local evidence only
- CanProceed does NOT authorize autonomous action
- Each human trial requires explicit operator approval
- Brier calibration required for each trial outcome

NEXT SAFE ACTION

BLOCKED: 5 successful founding seat demos with cleared cash [critical gate]

Unblock Path for founding-demos-5:

- 1. Review gate requirements in status.json
- 2. Collect evidence of completion
- 3. Update confidence scores
- 4. Re-run gate monitor
- 5. Do not proceed until canProceed: true

Trial Execution (when ready):

- 1. Verify canProceed: true in this report
- 2. Get explicit operator approval for each participant
- 3. Record human approval receipt
- 4. Execute trial with full safety gates active
- 5. Record outcome for Brier calibration
- 6. Update Movie 3 confidence

VALIDATION PATH

- [] Review all blocked gates
- [] Collect missing evidence
- [] Verify PPE if medical claims
- [] Confirm ASI pattern boundaries
- [] Test Brier tracking with forecast
- [] Operator approval for trial
- [] Archive this report
