

■# NOVEL WORKSTREAM + PATENT CLAIM CONVERGENCE REPORT (2026-05-27)

EXECUTIVE SIGNOFF

This report converges past work, present operational state, and a 2-week outlook into one founder-ready packet. Patent-claim candidates are framed as claim drafts grounded in existing local artifacts, not legal grants.

EVIDENCE BOUNDARY

| Class            | Meaning                                                              |
|------------------|----------------------------------------------------------------------|
| repo_verified    | File/script/report exists locally now.                               |
| metadata_only    | Repo is listed but not fully locally validated in this run.          |
| projection       | Planned next step requiring proof.                                   |
| patent_candidate | Draft technical claim language requiring counsel and novelty search. |

PAST WORK CONVERGENCE (WHAT ALREADY EXISTS)

| Surface          | Past Build                                          | Evidence                                                                 |
|------------------|-----------------------------------------------------|--------------------------------------------------------------------------|
| Control plane    | Lantern OS canonical local repo                     | C:\tmp\lantern-os, reports/LANTERN-OS-WHITEPAPER-v0.1.md                 |
| RAG house        | Flat dollhouse + room model + source labels         | skills/lantern-rag-dollhouse/references/LANTERN-OS-RAG-DOLLHOUSE.flat.md |
| Report system    | !perfect markdown-to-PDF builders                   | scripts/Build-PerfectArtPdf*.ps1                                         |
| Wallet lane      | Local factual cash ledger and invoice state machine | data/wallet/local-cash-wallet.json, data/wallet/ledger.jsonl             |
| Execution plane  | Orchestrator lane mapped and linked                 | manifests/OLD-WORKSTREAMS-AND-REPOS.md                                   |
| Confidence plane | Arc Reactor model for staged readiness              | reports/ARC-REACTOR-12-STEP-CONVERGENCE-MODEL.md                         |

PRESENT CONVERGENCE (CURRENT TRUTH)

| Domain                 | Present State                                        | Confidence  | Evidence Class |
|------------------------|------------------------------------------------------|-------------|----------------|
| Founder packet quality | High visual maturity and repeatable generation path  | Medium-High | repo_verified  |
| Wallet truth           | invoice_sent recorded; cleared cash still \$0        | High        | repo_verified  |
| Repo universe map      | Local + metadata-only repos are explicitly separated | High        | repo_verified  |
| App readiness          | Local app + APIs documented/validated in manifests   | Medium-High | repo_verified  |
| Public market proof    | Not yet established by payment/user receipts         | Low-Medium  | projection     |

NOVEL WORKSTREAM UPDATES

| Workstream               | Novel Angle                                              | Current State | Next Proof                         |
|--------------------------|----------------------------------------------------------|---------------|------------------------------------|
| Founder dark RAG packets | White-on-dark WCAG + symbolic dot-line compression layer | implemented   | reader-comprehension feedback pass |

| Workstream                    | Novel Angle                                                     | Current State | Next Proof                           |
|-------------------------------|-----------------------------------------------------------------|---------------|--------------------------------------|
| Per-person report evolution   | Profile + evolution-log driven report adaptation                | implemented   | section scoring + auto-delta summary |
| Unified SDK wrapper           | Single orchestrator endpoint for wallet/report/validation loops | implemented   | add API surface endpoint adapter     |
| Cross-repo founder governance | Top-level founder packet listing all RAG repos each run         | implemented   | deterministic appendix expansion     |

PATENT-CLAIM CANDIDATE SET (DRAFT, NON-LEGAL)

| Claim ID | Candidate Claim                                                                                                                                                              | Basis                                                           | Status           |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|------------------|
| LC-001   | A local-first convergence engine that maps heterogeneous artifacts (repos, PDFs, chats, manifests) into a source-labeled flat memory house and emits decision-grade packets. | RAG flat file + report pipeline + manifests                     | patent_candidate |
| LC-002   | A factual wallet state machine integrated with AI workflow orchestration that separates draft/sent/cleared/refund/objection events and blocks revenue overstatement.         | wallet JSON + JSONL event logger                                | patent_candidate |
| LC-003   | A report compiler that merges semantic markdown evidence, adaptive profile memory, and art-overlay channels into accessibility-preserving output artifacts.                  | New-PerfectProfileReport.ps1 + Build-PerfectArtPdf* + validator | patent_candidate |
| LC-004   | A staged confidence governance model coupling evidence-class labels to incremental readiness progression across local/public/distributed phases.                             | Arc Reactor 12-step model + evidence classes                    | patent_candidate |
| LC-005   | A symbolic-compression visual overlay protocol that preserves human-readable canonical text while embedding auxiliary structured cues for trained operators.                 | tesseract dot-line overlay renderer path                        | patent_candidate |

CLAIM STRENGTH SNAPSHOT

| Claim ID | Novelty Signal | Implementation Signal | Risk                                        |
|----------|----------------|-----------------------|---------------------------------------------|
| LC-001   | Medium         | High                  | prior-art overlap with generic RAG systems  |
| LC-002   | Medium-High    | High                  | may be seen as business-process abstraction |
| LC-003   | Medium         | High                  | styling/rendering claims can be narrow      |
| LC-004   | Medium         | Medium-High           | governance-model prior art likely broad     |
| LC-005   | Medium         | Medium                | interpretation/utility arguments required   |

2-WEEK CONVERGENCE OUTLOOK

|  | Day Range  | Objective                       | Deliverable                                               | Proof Gate                           |  |
|--|------------|---------------------------------|-----------------------------------------------------------|--------------------------------------|--|
|  | Days 1-3   | Stabilize founder report engine | locked style profiles + deterministic output naming       | validator pass + artifact timestamps |  |
|  | Days 4-6   | Patent-candidate evidence table | claim-to-file index with implementation pointers          | internal review packet               |  |
|  | Days 7-9   | Wallet motion proof             | 5 factual outreach/outcome events logged                  | ledger event receipts                |  |
|  | Days 10-12 | Cross-repo appendix expansion   | per-repo 1-page appendix generator                        | 30+ page founder packet regenerated  |  |
|  | Days 13-14 | Decision checkpoint             | promote/hold list for each candidate claim and workstream | founder signoff note                 |  |

RISKS AND HOLDS

- <b>1.</b> Patent claim language here is technical drafting, not legal opinion.
- <b>2.</b> Dirty worktrees can reduce provenance confidence if not isolated in commit slices.
- <b>3.</b> Public traction remains unproven until user/payment outcomes are logged.

NEXT ACTIONS

- <b>1.</b> Build a claim-to-artifact index (claim\_id -> script/report/manifest lines).
- <b>2.</b> Generate a dated legal-handoff technical annex from this report.
- <b>3.</b> Keep all claims tagged by evidence class and confidence deltas only after receipts.

FOUNDER DECISION LINE

Promote the novel workstream report and patent-candidate drafting lane as an evidence-first internal asset, hold any legal/public patent claims until counsel review and novelty search complete.
